To,
Head of Quality Assurance

Subject: Application for Game QA Lead / QA Project Lead

Dear QA Leadership Team,

I run QA as a release-decision function, using an ISTQB-aligned test process. Every build is measured against written exit criteria, every escaped defect gets a root-cause analysis, and every go/no-go call is backed by defect data. That approach has carried me from AAA console testing on For Honor at Ubisoft to more than three years as Project Lead – Game Testing at IGT Solutions, where I am the primary delivery and release owner for Western clients and hold QA sign-off authority for every milestone and release.

At IGT, I built a QA delivery model that scales. With a core team of up to 10 QA engineers, we have shipped 40+ live Steam titles for European and US studios and manage QA for 19+ UAE indie-studio titles per month. Documented test cases, paired onboarding, and written, risk-based re-scoping keep coverage stable through crunch and team churn, while I manage milestone delivery across overlapping US, European, and Gulf Standard time zones. The results: 90%+ of releases shipped with zero critical post-launch defects, regression cycles cut by around 40%, and a 99%+ crash-free rate on live titles.

Two examples show how I lead. On Buluk Mayan Warfare, I issued a No-Go verdict with 15 of 24 S1/S2 defects unresolved and set a P0/P1/P2 fix plan that focused engineering on root causes. On Jewel Match Solitaire Seasons CE, when a client-side user reported defects we had missed, I led the root-cause analysis and introduced a 29-case compatibility suite before the September 2024 go-live.

What draws me to your studio is the opportunity to work on your games and the pipeline challenges behind them, such as cross-platform validation of branching quest systems and holding a 99%+ crash-free rate across weekly hotfixes. I bring experience owning release readiness from Alpha through post-launch LiveOps and leading localization for multi-region releases.

I would require visa sponsorship for an on-site role outside India and am also available for remote engagement from Delhi. I would welcome a conversation about how I can strengthen quality and release predictability for your team.
